Hi,

I have migrated from a friend's domain support to Fastcomet 1 year ago. Since then, I have been having endless issues with my WP sites because my friend refused to support me anymore since my sites are not with him.

A.   Since I have activated Jetpack, AMP, Smush, Relative URL ShortCode, Restore Image Title, Product Catalogue Pixel the week before, the following no longer respond:
  1.   Edith with UX Builder not working
  2.   Options on listing not responding
  3.

I have since deactivated Jetpack, Smush, Relative URL ShortCode, Product Catalogue Pixel, but the above issues still remained unresolved.

B.   Recently was told to activate NitroPack, does it affect the Smush?
C.   I want a super-fast speed and responsive WP ecommerce site.
D.   I occasionally received the following error messages from Google Console:
  1.   Top Issues - the following issues were found on your site:
    ➢ Content wider than screen
    ➢ Clickable elements too close together
E.   How to permanently reduce the images in storage?
F.   Fastcomet kept sending me endlessly everyday that I have reached the monthly quota on Resource Usage while I was at my backend dashboard doing listings to my site, or editing and deleting reviews from AliExpress down to my site. They even blocked my site before end of Jan 2021.
G.   Too many other plugins on my site viewable from the WP Dashboard, I want to do a clean-up of plugins - what I must have and what I do not need.
H.   I want to use Mailchimp but do not know how to use it.
I.   My Social Rabbit has stopped auto posting to my Pinterest account for the past 2 months. I have lost tens of thousands of viewership and many organic followers since then. DropShip Me has till date could not obtain any API from Pinterest, cannot help auto-posting to my Pinterest account. It is only posting to my Twitter, Instagram and FB accounts every 3 hourly.

  Are you able to help solve auto-posting to my Pinterest account?

J.   I want as much as possible to use free plugins on my site www.GoodDealsEveryDay.com
K.   I have an inquiry for price since Mon this week on FB. Due to listing options are not responding, I am not able to quote the potential customer the product price. I need the options and Edith with UX Builder resolve ASAP first before you resolve the other issues named above.
L.   I need to get my site to be ranked in SEO, what is the none fee paying or cheapest options I can choose to do so? I have yet to make any sales in the 3 years
M.   How much will you charge me for the above solutions?
N.   How fast can you resolve all of them?

I would need further support to my site and possible sites also using WordPress, so will you decide to charge me much cheaper so that I could afford to continue to engage your services?

Udele Corben
